

CEWELD 430

TYPE	Solid stainless steel welding wire for ferritic stainless steels. (Type 430, 17% Cr)						
APPLICATIONS	CEWELD® 430 can be used for various build-up welding and joining applications. Sealing surfaces in steam, gas, and water fittings at operating temperatures up to +450°C.						
PROPERTIES	CEWELD® 430 offers excellent weldability, good corrosion resistance and high temperature resistance. Its Brinell hardness is approximately 225 HB, depending on the base material and the number of layers. CEWELD® 430 exhibits scale resistance of up to 950°C in air, oxidising combustion gases and sulfur-containing combustion gases at higher temperatures. It is preferable to weld with a pulsed arc and to preheat larger wall thicknesses to between 150 and 300°C. Ensure low heat input.
